### Famous For:

Creating the ENNDT • mathematical modelling • integer sequences published at OEIS.org (Open Encyclopedia of Integer Sequences)

### Organisations/Creator:

Founder and President of the sPIqr Society

### Organisations/Memberships:

Full member of about thirty high IQ groups, from ACH to Ultranet (Mysterium, OATH, Glia, ISI-S, Miqro, Epimetheus, 4G, SinApsa, etc.) and a former member of Italian Mensa.

I am currently a budding writer working on my first novel, it is almost ready. In the meantime I have done some little jobs, in accordance with my inclinations and skills... unfortunately my country does not provide good employment prospects for under 30s.

### Why work with IQ:

Because I trust in what I feel, thus I think that I can help many people - young gifted especially - with my work and my passion. I am going to create a new generation of equally normed dynamic IQ tests, improving the ENNDTs project started in 2012, developing dynamic spatial tests which are immune from the risk of cheating. ENNDTs have been the first example of dynamic numerical tests: the process is entirely automatized, and the test itself is different from candidate to candidate, changing from one examination session to another one as well. Nevertheless, each version maintains exactly the same difficulty as the others. My goal is to get the same result with regard to spatial tests.

### Statement for the World:

I think that every child should have the same opportunities: the true substantive equality is the enhancement of individuality.
